Mateo Štibi

Junior Software Developer · Backend & AI

Osijek, Croatia · mateo.stibi@gmail.com · github.com/mstibi

PROFILE

Computer engineering student at FERIT Osijek with hands-on development and QA experience on a real Android app. I enjoy building backend and machine learning projects and I am looking for a junior or student developer role.

EXPERIENCE

Software Development & QA Assistant · eCheckin Mar 2026 – Oct 2026

- Tested the company's Android app across devices and releases, and reported reproducible bugs with clear steps.
- Fixed bugs in the app's codebase together with the development team.
- Checked fixes and new features before release so regressions did not reach users.

Other work (alongside studies)

- **Server** · Wychmere Beach Club, Harwich Port, MA, USA · Jun 2026 – Sep 2026
- **Call Center Agent** · T-Mobile · Jun 2025 – Oct 2025

PROJECTS

lora-workflow · github.com/mstibi/lora-workflow

Python, PyTorch, Hugging Face Transformers / PEFT / TRL, bitsandbytes, Docker

- Config-driven LoRA/QLoRA fine-tuning pipeline that runs the same on a CPU laptop, a free Kaggle T4 and Docker-based cloud GPUs.
- Fine-tuned Qwen2.5-1.5B to turn messy Croatian gym-log notes into JSON: exact match rose from 14% to 96% on 200 held-out synthetic examples.
- Cut peak VRAM to 2.6 GB for the 1.5B model (4-bit QLoRA, gradient checkpointing, paged 8-bit optimizer) vs 6.5 GB for a 0.5B LoRA.

order-processing-system · github.com/mstibi/order-processing-system

FastAPI, PostgreSQL 16, hand-written SQL, Docker Compose, pytest, k6

- Order API that never charges twice or oversells, even under heavy concurrency and failing payments (idempotency keys, payment reconciler).
- 1,000 concurrent buyers for 100 items: naive code sold 1,000; atomic UPDATE and SELECT FOR UPDATE sold exactly 100.
- 500 orders with 20% declined and 40% timed-out payments: 0 duplicate charges and 0 oversold items after reconciliation.

twitter-sentiment-classifier · github.com/mstibi/twitter-sentiment-classifier

Python, scikit-learn, pandas, LightGBM, Streamlit

- Streamlit app that labels a tweet, comment or review as positive, negative or neutral, with a confidence score.
- Trained and compared 6 models; best: linear SVM with 94.2% validation accuracy and 0.94 macro F1.

EDUCATION

Bachelor of Computer Engineering (2nd year) · FERIT, University of Osijek 2024 – present

Bachelor of Physiotherapy · Lavoslav Ružička University of Applied Sciences, Vukovar 2021 – 2024

SKILLS

Programming	Python, C, C++, SQL, Java (basics)
Backend	FastAPI, PostgreSQL, REST APIs, transactions and concurrency, Docker, Docker Compose, Git
ML / AI	PyTorch, Hugging Face Transformers, PEFT (LoRA, QLoRA), TRL, scikit-learn, pandas
Testing	pytest, manual and regression testing of Android apps, k6 load testing
Languages	Croatian (native), English (C1–C2) · Driving licence B
